mouse = mouse || evt.mouse || {},  
touch = touch || evt.touch || {}  
);
```

BE AWARE. BE SECURE

SENTINEL

In a post-perimeter world, organizations must rely on Managed Endpoint Detection and Response (MEDR) as a service from a managed security service provider to provide the first line of defence against a cyberattack. Yet, existing solutions require advanced expertise and time to use effectively. Modern EDR that is built for speed for organizations of all sizes that value simplicity and efficiency.

Experience The Advantages

Deploy Fast. Manage Simply.

This service was built for speed - Organisations with scarce security resources achieve active response and a strong security posture in minutes.

Suspicious Activity Monitoring

This service monitors endpoints, creating a “haystack” in the cloud where a combination of behavioural analysis and machine learning pin-points any IoC “needles.”

SENTINEL

Managed Endpoint Detection and Remediation comes with a powerful Endpoint Protection platform. Today, even basic malware campaigns are automated - enabling cybercriminals with few resources to launch sophisticated attacks against organizations of all sizes. To fight back, businesses deployed multiple layered, yet siloed, endpoint security solutions, which threat actors soon defeated by exploiting the gaps in between.

These synergistic trends mean there has never been a greater need for a unified, comprehensive approach to endpoint protection that's strong enough to thwart advanced attacks, but agile enough to adapt to the threat landscape.

Key Advantages:

- Precise protection without bloat
- Innovation that outpaces malware
- Complete solution, any size organization

SENTINEL

When suspicious activity occurs, security professionals need to actively respond in mere minutes, immediately stopping potential threats from propagating, while determining if the behavior is indeed malicious.

Endpoint response solutions need to be quick and easy to deploy, rapidly protecting organizational assets and shortening the time to respond. Integrated threat detection allows for progressive enrichment of threat detection insights across an attack chain.

And a cloud-based platform that guides administrators through investigation, response, and recovery give them the tools and intelligence needed to respond.

Key Advantages:

- Active response in minutes
- Linking engine for complete remediation
- Up to 72 hours of Ransomware Rollback
- Progressive Threat Detection
- Flight recorder for suspicious activity monitoring
- Endpoint Isolation
- Guided Threat Response
